Internship Title: E-COMMERCE WEBSITE		

WEEKLY REPORT-1

Completed Tasks

OBJECTIVES FOR THE WEEK

The first week of the internship focused on understanding the React.js development workflow and setting up the foundation of the E-commerce Website project. The primary objectives were:

1. Setting up the React.js development environment using Vite.
2. Understanding the project structure, React components, and folder organization.

3. Designing the basic user interface of the E-commerce Website.

4. Creating reusable components and displaying product information.

WORK ACCOMPLISHED

1.1 Project Setup and Environment Configuration

- Installed Node.js and created a React project using Vite.
- Configured Visual Studio Code and installed the required extensions.
- Organized the project structure by creating folders for components, pages, assets, and styles.

- Verified the project by running the development server successfully.

1.2 E-commerce Website UI Development

Technologies Used: React.js, JavaScript (ES6), HTML5, CSS3, Bootstrap, Vite

Work Done:

- Developed the basic layout of the E-commerce website.
- Created reusable React components such as Header and Home.
- Added multiple product cards with product images, names, descriptions, and prices.

- Applied CSS styling to improve the appearance and layout of the website.
- Integrated Bootstrap classes to create a responsive interface.
- Organized image assets and imported them into React components.
- Tested the application to ensure proper rendering of components and responsive layout.

KEY LEARNINGS

1. Understood the React project structure and component-based architecture.
2. Learned how reusable components improve code organization and maintainability.

3. Gained experience using JSX for building user interfaces.
 4. Learned to manage assets and CSS within a React application.
 5. Improved understanding of responsive web design using Bootstrap and CSS.
-

Plans for Next Week

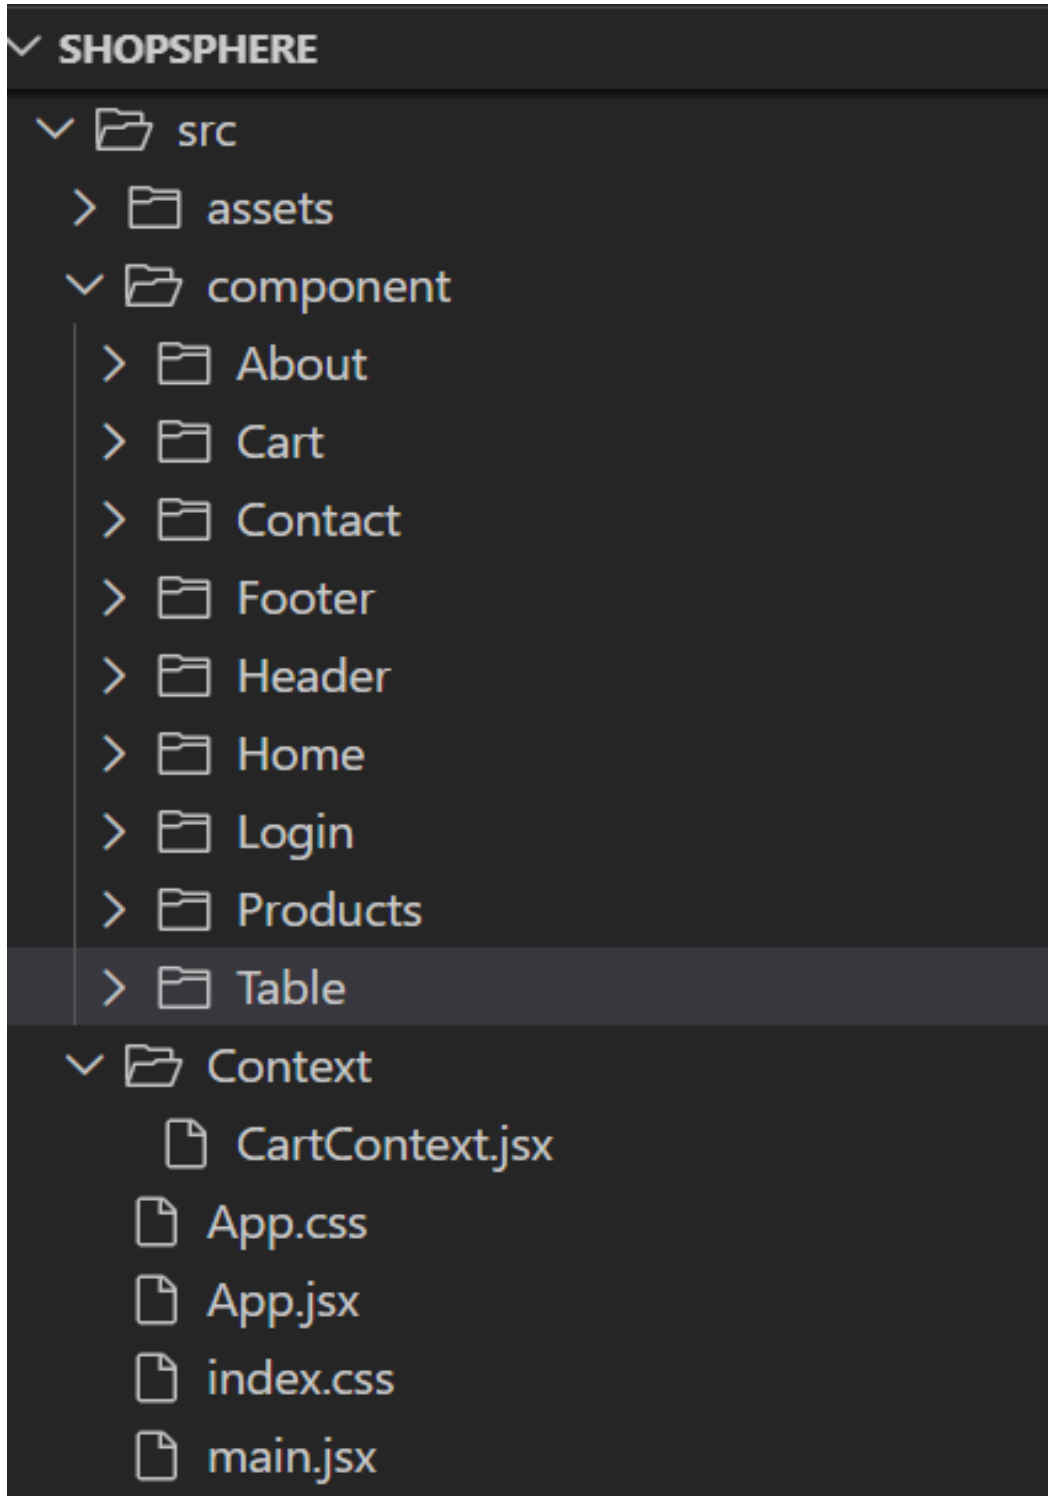

1. Implement React Router for navigation between different pages.
2. Develop the shopping cart functionality using React state management.

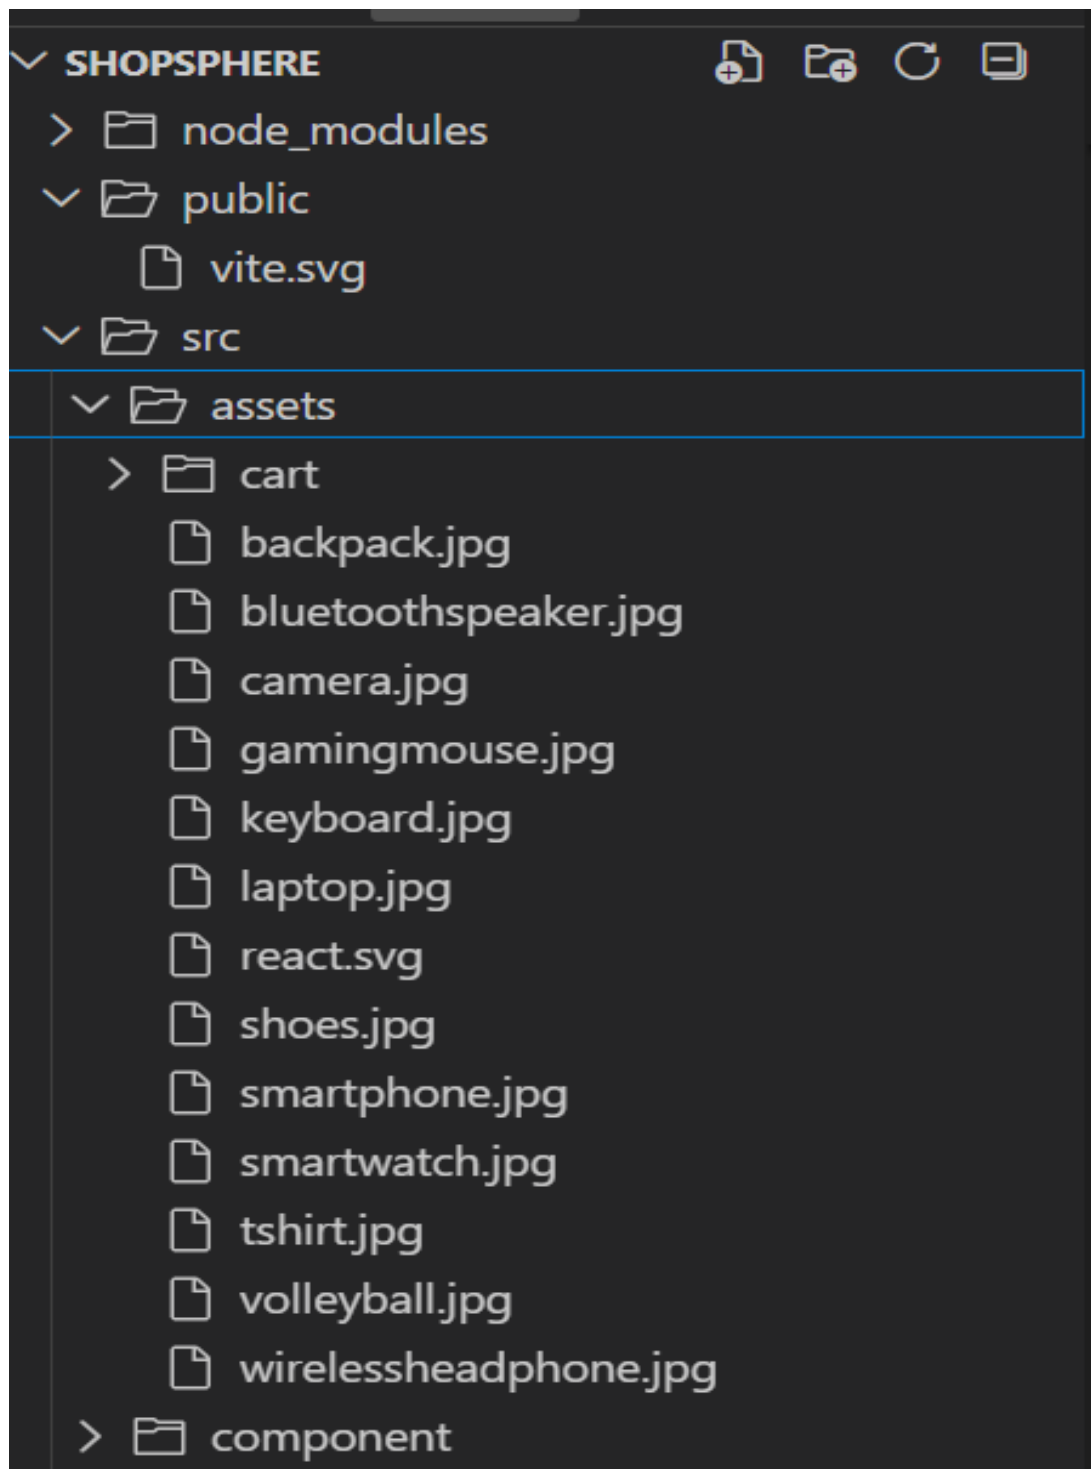

3. Add product search and filtering features.
 4. Improve the user interface and optimize component reusability.
 5. Test newly implemented features and resolve bugs.
